

Towards Zero Methane Emissions

A Deployment Accelerator

OGCI Climate Investments and our venture partners invite companies with promising technologies and/or business models in the areas of **methane detection, measurement and mitigation** along the energy value chain to submit ideas or funding proposals. We will select a shortlist of 10–15 companies for presentation and discussion on Venture Day.

OGCI Climate Investments is **committing USD 20 Million** to invest in selected technologies and business ideas; in addition our partners are committed to piloting/deploying technologies which have reached appropriate maturity.

What is Venture Day?

- Invitation-only event hosted by OGCI Climate Investments and other potential investors
- Presentations by 10-15 companies seeking funding to support methane technology commercialisation
- Breakout sessions to challenge proposed technologies / business models and discuss deployment

Timing

Deadline for applications:
15 May 2018

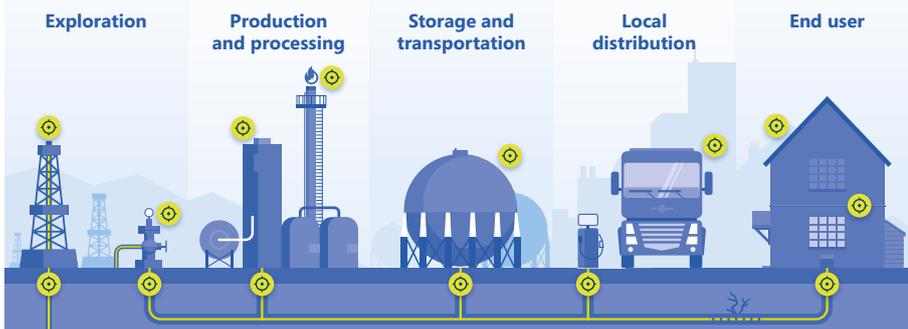

Climate Investments Venture Day:
25 June 2018, Washington DC

Announcement of awards:
24 September 2018

ENERGY DELIVERY

Natural gas is an excellent source of power, heat and raw materials for everyday life. Any leaks across production, distribution and use will result in emissions of methane, a key greenhouse gas that causes climate change. We are committed to stopping the leaks and moving toward zero methane emissions. Join us with technologies and solutions.

About OGCI Climate Investments

The **Oil and Gas Climate Initiative** is a voluntary, CEO-led initiative which aims to lead the industry response to climate change. Launched in 2014, OGCI is currently made up of ten oil and gas companies that pool expert knowledge and collaborate on action to reduce greenhouse gas emissions. Its billion-dollar investment arm, **OGCI Climate Investments**, supports the development, deployment and scale-up of low emissions technologies.
